Energy Committee Internship

Energy Committee interns focus on how our community can lower its energy footprint through activities and community education that promote energy conservation, green building and better local and regional energy policies. Towards this end, the Committee holds workshops, expos, and forums while working with homeowners, church congregations and the small business community to advance its mission.

Project Green Light, ECO's energy conservation program, works with local churches to help them become better stewards of creation. By monitoring their energy use, participating in workshops and home energy inspections, congregations of faith can take substantial steps towards lowering their carbon footprint and demonstrating to other residents how to become better stewards of our natural heritage. Interns will also have the opportunity to work with ECO on its annual Earth Day Festival, Green Home Tour and its Greening of Downtown initiative.

Environmental and Conservation Organization (ECO) in Hendersonville welcomes your interest and applications for student internships. ECO is an environmental advocacy organization dedicated to protecting the natural heritage of Henderson County and the mountain region as an effective voice for the environment. We fulfill this mission by promoting green infrastructure, protecting water quality, promoting recycling and educating the public on renewable energy options and energy conservation. Each of these mission areas offers opportunities for unique student internship experiences. Please contact us for more information.
